

# Tech COE Allocation Reporting

Oracle AI Data Platform (AIDP) · Data Engineering Accomplishment

## Overview

The Tech COE Allocation Reporting initiative transforms a manually maintained pivot-format Excel workbook into a governed, queryable data asset in Oracle Autonomous Data Warehouse (ADW), enabling OAC dashboards for in-depth analysis of team utilization, project allocation, and holiday capacity across departments — without requiring any changes to the source planning process.

## Future Enrichments

The normalized Bronze table provides a clean foundation for downstream enrichment. Recommended Silver and Gold layers:

| Layer  | Column               | Description                                                           |
|--------|----------------------|-----------------------------------------------------------------------|
| Silver | UTILIZATION_PCT      | Scheduled hours as % of standard 40-hr week per arganaut              |
| Silver | IS_HOLIDAY           | Boolean flag derived from PROJECT_CODE = 'Holiday'                    |
| Silver | IS_BILLABLE          | Flag based on project code prefix rules (e.g. ARGU = client billable) |
| Silver | FISCAL_MONTH         | Normalized fiscal month label for cross-year consistency              |
| Silver | DATA_QUALITY_FLAG    | Flags arganauts with no hours in a given month or duplicate entries   |
| Gold   | DEPT_WEEKLY_CAPACITY | Total scheduled hours per dept per week for capacity heat maps        |
| Gold   | BENCH_HOURS          | Weeks with zero project hours — identifies bench/unbilled time        |
| Gold   | ROLLING_4WK_AVG      | Smoothed utilization trend per arganaut for trend reporting           |
| Gold   | PROJECT_MOMENTUM     | Week-over-week change in project hours to flag ramp-up/wind-down      |
